Skills

C++ || Python || HTML/CSS || DSA

Projects

Library Management System (Python)

- A **completely comprehensive real-time library** with work space for users using Python programming.
- Tables for **user** to ensure**.**
- **Admin sustains all library features** whereas **users have limited access.**
- Has the capability to **identify defaulters** who failed to return the book and who may be **fined**.

Bank Management System

using **python** programming language.

- It gives **options to users** to create account, deposit, withdraw etc.
- **Unique Account number** is given to every user.

Employee Leave Management System using C programming language

- It takes the input from the user(employee) and then **generate the leaves chart** of the Employee.
- Helps Employee maintain the leaves chart and also add the bonus leaves if validated.
